Attorney Docket No. 24448-0032

## ABSTRACT OF THE DISCLOSURE

PROCESS AND COMPOSITIONS FOR PRINTING SUBSTRATES

The invention relates to a process and a composition which can be used as a printing paste for printing substrates. In the process, a printing paste comprising a) a matrix-forming precondensate based on polyorganosiloxanes which is obtained by the sol-gel process, and b) one or more coloring, luminescent, conductive and/or catalytically active fillers, is applied imagewise to the substrate and densified by heat treatment, where the densitication is carried out at a temperature which is lower than the glass transition temperature of the matrix forming.

The process and the printing pastes are suitable, for example, for the production of conductor tracks and of decorative patterns.
